The logs and screenshots indicate a system outage and a discrepancy that necessitates official disclosure from the exchange. Specifically, while Error Codes -1008, -4118 and -2010 prevented manual order execution, the underlying matching engine might have still been operational for ADL orders, leading to involuntary position reductions.

The API stopped processing requests around 4:56.

fisrt-ice（继续前进） ✔ @firstcap_ice · 2025年10月15日

从4点56分开始 接口已经不能处理，这是我系统的部分日志。

with other r

Q 1   t↕ 3   ♡ 8   ⅈⅈ 3,324

We submitted ReduceOnly/Close orders in accordance with protocol; however, we repeatedly encountered a combination of errors (503/1008/4118/2002) during the window.

fisrt-ice （继续前进） ✓
@firstcap_ice

波动不是起点。USDe 的极端价是后段症状，在此之前，做市撤单+买盘真空已让"深池"比"浅池"更早更深地下穿。

风控通道拥塞。我们按规则下达 ReduceOnly/Close，却在窗口内反复遇到 503 / -1008 / -4118 / -2022 等组合错，风险无法按计划缩减。

PM 的设计缺口。统一账户的"一键平仓"仅限 UI；公开开发文档里没有等价的一键 API。极端时刻这就从"系统通道"退化成"人手通道"。

撮合/风控的优先级在高并发下偏向清算流，而非"自救流"（ReduceOnly/Close）。清算单吃掉资源，减险单被挤在后面。

指数/价格带的本地方法学在"极端打印"里放大偏差，把场内异常外溢到标记价/强平门槛。

保险基金与 ADL 的次序边际没有形成有效"缓冲层"，ADL 快速跨档触发，从 >2x 传导到 ~1x。

时间维度上，约百余分钟同秒强平、止损排队失败、预警滞后同时出现，这是"拥塞态"的典型画像。

结果就是"深池更深"、指数外溢、跨场联动清算，形成"死亡螺旋"。

There are issues with Binance API order placement, which have caused stop-loss and buy-the-dip orders to fail.

作为一个自认为资深的从业人员，我不想抱怨，也不想责怪谁，我只想陈述我经历的事实，从前天到现在，我以为，一度认为我在做梦，74,312,519 我都经历过，我也侥幸逃过，包括当时的ftx 我有大量资金 目前也没赔付，我也默默地承受了，这次的压抑感，有点压的我喘不过气，我只想说说这次事情的经过，量化总体爆仓500多w，不算多不算少，可能在大户眼里这不算什么，但是对于我们这些从底层奋斗的人来说这是所有，第一次在x写长文发现，写到这里发现字数超出只能开会员，鼓足勇气找到所有的银行卡付款，却发现只能付费年会员，又折腾一圈，发现只有Premium+可以发长文，但是月费接近400rmb，而且可以月费，那么决定还是付费一个月，将我的经历写出来，首先声明，我在这里没有责怪任何平台的意思，只是好奇，我的量化采用 多子账户模式 也是当初考虑风险的原因，子账户资金从7w-4w不等，多达几十个子账户以上，但是平仓时间出奇的一致5点19-20分左右，而且是双平台okx,币安，一起。但是按照逻辑，不应该是二家交易所，先强平我金额少的然后是金额多的账户，按照杠杆来说的话，金额多的账户杠杆略低，那么应该是先平仓杠杆相对高 金额少的账户，然后才是金额多的账户，但是他们几乎同时 几十个账户全部强平，而且在以前杠杆率低的时候交易所会提醒，这次是爆仓的同时才收到杠杆率低的，而且币安在接口还存在通过api接口下单失败的情况，导致止损 和 抄底 失败。我不清楚接口失败导致的亏损会不会赔偿 @cz_binance @heyibinance 麻烦币安回复我下，世界上没有绝对的0风险的策略，大家都是在策略上找到相对安全和合理收益的平衡点，这也就是为什么每次市场黑天鹅的时候 很多大资本也会挂的原因，但是这次真的是市场性黑天鹅嘛，而不是 交易所的放任，或者说制度的不完善导致的结果？我不知道，这篇文章会有多少人看见，我只是想到哪里写到哪里，我自认为我将安全垫放到极低，杠杆降到极低，甚至说比mm的风险还低的情况，将资金周转率提高，达到合理的收益，即可，我想到过任何市场上存在的风险，想过任何的规避，却没有想到人为或者结构性bug，看了很多关于这次事件的分析，不管是usde循环贷等问题的诱发还是其他质

返回日志:

```
{
    msg: "Server is currently overloaded with other requests. Please try again in a few minutes.",
    code: -1008
}
```

Our logs indicate that stop-loss and close requests were initiated, yet we received timeout responses.

Same. Got massive volume of API timeouts. They were completely unable to execute any trades during that period

0x00 @0x000F4240 · 2025年10月15日

我在币安开的2个小号,5个逐仓仓位也是直接插爆,API显示有发止损的平仓请求,但是响应超时,但是跟他们说这些这又有什么用呢?他们只会赔有话语权的,甚至于币安的那个沙雕赔付我由于存了大量理财都不够标准. 我之后的量化会转移到hyper去了,起码他们那天扛住大量的请求,没有出现超时.

一样 我大量。api超时的，那个时候根本不可能处理

💬 1   ↻   ♡ 4   📊 2,575   🔖 ⬆

Did anyone else get rekt at 5:20 on the 11th? Even my 1.1x leverage got liquidated. I kept getting errors trying to set a stop-loss at 5:17.

I got liquidated because the WebSocket connection was severed

送，即有多少成交数据产生，就会推送多少数据。接收数据再处理打
印，可能也会导致消息的堆积
3. 客户端延迟：例如，您的系统或应用程序可能正忙于处理其他任务或
请求，花费太长时间从 WebSocket 发送或接收消息

请教一下，我开发一个 APP，集成 币安支付，我想让用户支付 USDT
，刚买 SOL，购买成功以后直接转到用户地址可以吗；我看 文档中没
有这样的功能呢。但是我在 MOONSHOT 看他有这个功能啊
                                              ↩ 1 9:45 PM

supper cx_量化开发
大佬们，有遇到10月11日5:20插针爆仓的吗？综合杠杆率1.1都被爆了，
5:17 api下单止损一直报错{'success': False, 'code': -1008, 'msg': 'Server
is currently overloaded with other requests. Please try again in a few
minutes.'}
                                                        10:00 PM

Kate stan
各位你们的保活机制是怎么实现的哦。我昨天因为websocket假死之后
爆仓了😢
                                              ↩ 1 9:57 PM

想参考参考你们的思路   ↩ 1 9:57 PM

亏了几十万U   9:57 PM

websocket订单推送+主动查询订单状态吗？   ↩ 4 9:58 PM

莫须有
莫须有
这是币安api内部报的错误 Long...
这个报错有技术看看吗？   10:03 PM
